

## Installing ESP8266

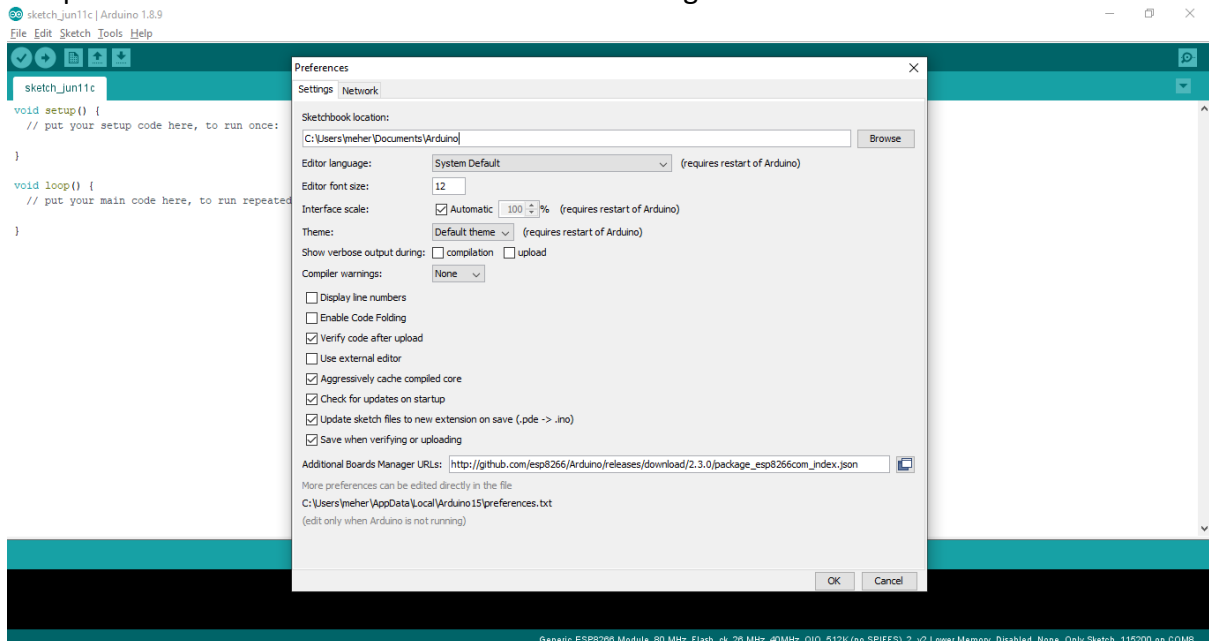

Go to File > Preferences (Ctrl +,)

Copy this JSON url

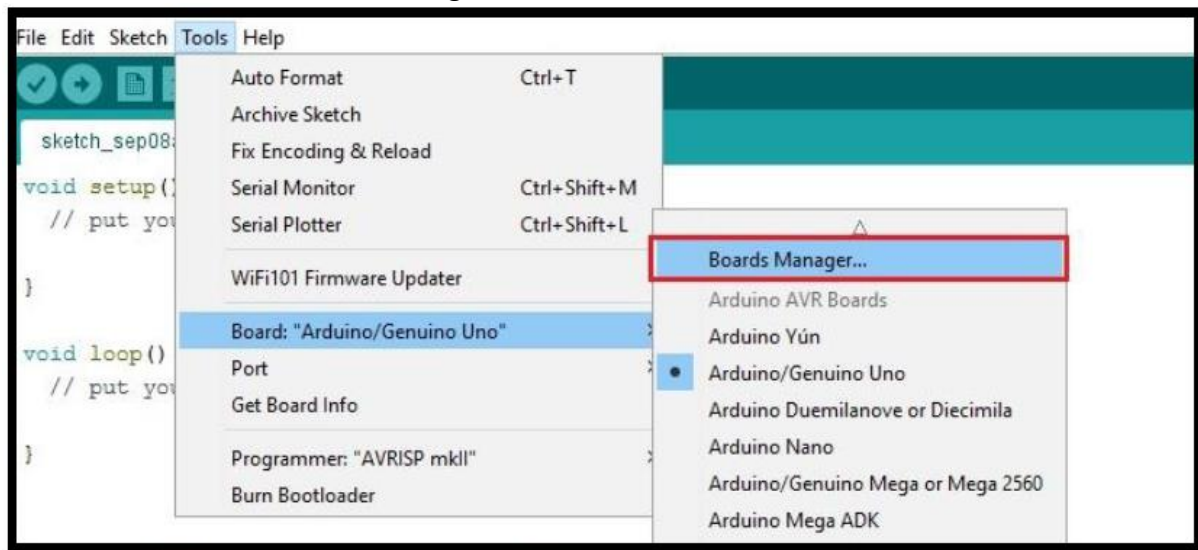

**[http://github.com/esp8266/Arduino/releases/download/2.3.0/package\\_esp8266com\\_index.json](http://github.com/esp8266/Arduino/releases/download/2.3.0/package_esp8266com_index.json)**

and paste it on the test box Additional Boards Manager URLs

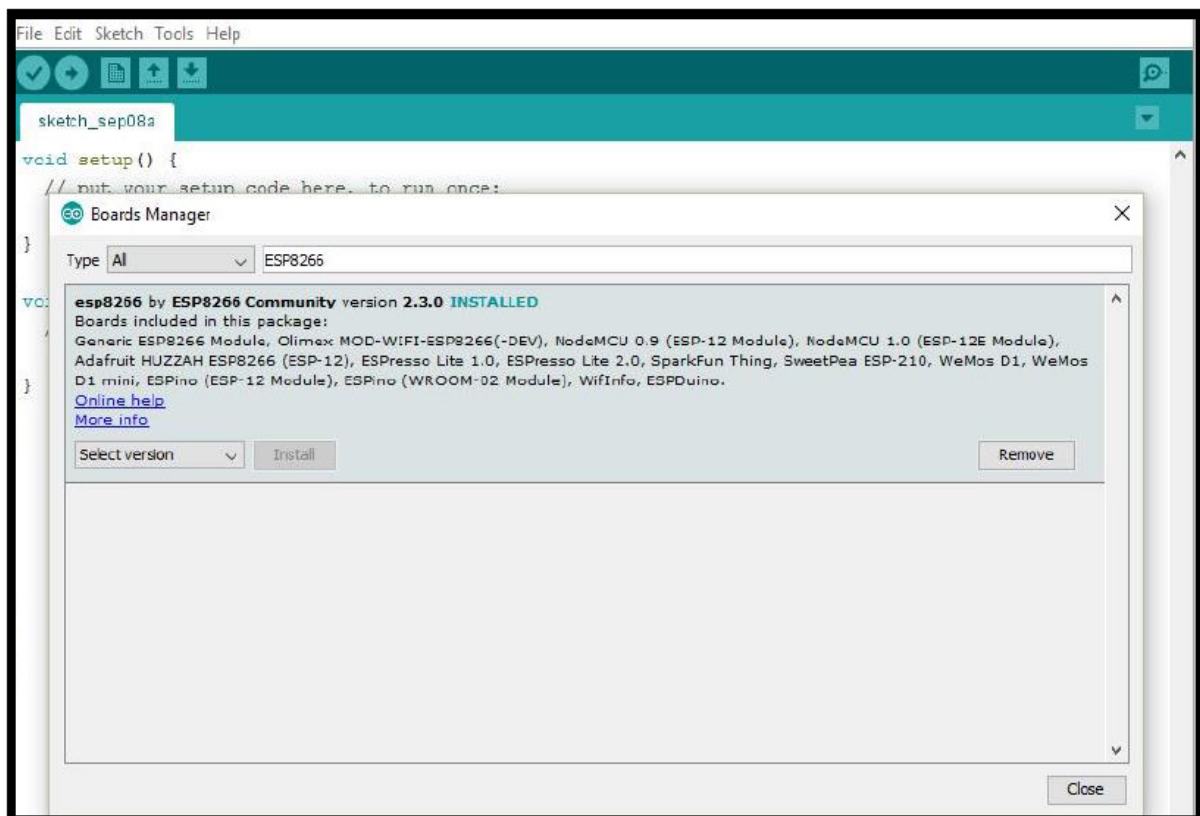

Click OK to close the preferences window.

Go to Tools > Board > Board Manager

Search for ESP8266 and click on "ESP8266 by ESP community" and Install **2.4.6** version. This will take few minutes

Once the installation done, restart the Arduino IDE.

Go again to Tools > Board and Select "GENERIC ESP8266"
